HemaClear sterile exsanguinating trounet successfully used in over 100,000 cases worldwide

"HemaClear gives me better predictability, it is easy to apply, allows more exposure and provides quality exsanguination" – Dr. Jesse Jupiter, Chief of the Hand and Upper Extremity Service at Massachusetts General Hospital, Boston, MA

LEARN ABOUT THIS EXCITING NEW TECHNOLOGY

- Wednesday 3:30pm – Physiological Dynamics – Prof. Noam Gavriel, Inventor and Founder
- Thursday 9:00am – TKR on Obese Patients with HemaClear – Dr. Les Matthews
- Thursday 1:30pm – Using HemaClear in TKR Comparison to Current Method – Dr. Wayne Goldstein

Graphic Design and Web Development by Graphic Advance

IMPROVING DISEASE DETECTION THROUGH ENHANCED SENSITIVITY

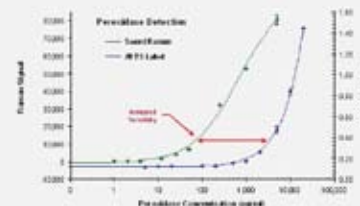

Sword Diagnostics is proud to announce the availability of its new technology for ultrasensitive immunoassays utilizing a proprietary raman detection system. Increased sensitivity provides you the ability to diagnose disease earlier and detect markers not currently used due to their low abundance. The components include the new Saber Detection System as well as reagent kits that may be incorporated into immunoassays that utilize horseradish peroxidase (HRP).

This new technology provides:

- Significantly increased sensitivity
- Increased dynamic range
- Simplicity in assay development and incorporation into existing assays

Instrument

The detector is a custom, state-of-the-art Raman spectrometer, designed to provide years of accurate and robust operation. The detector has a small 35cm x 35cm footprint (14" x 14"), is operated via an external laptop PC, and is designed for integration into various ELISA formats, including bead assays or 96-well microplates. All data acquisition and data management are automatic.

Reagent Kits

The activation of the Sword Raman substrate is catalyzed by HRP in a highly quantitative manner. This allows the Raman detection reagent to be easily integrated into existing assays that utilize HRP. The reagent kits are available in several formats described below.

Custom formulations as well as Sword's custom assay development service are available upon request. Contact us for more information.

Sword Ultra-ELISA Detection System

Ordering Information

Product Description	Units	Part Number
Saber Detection System	Each	5908
Quantitative Raman Peroxidase Assay	1kit = 500 tests	6007
Quantitative Raman Anti-Mouse IgG Conjugate Mediated Peroxidase Assay • Includes Peroxidase conjugated Goat-Anti-Mouse IgG	1kit = 500 tests	6008
Quantitative Raman Anti-Rabbit IgG Conjugate Mediated Peroxidase Assay • Includes Peroxidase conjugated Goat-Anti-Rabbit IgG	1kit = 500 tests	6009
Quantitative Raman Anti-Human IgG Conjugate Mediated Peroxidase Assay • Includes Peroxidase conjugated Goat-Anti-Human IgG	1kit = 500 tests	6010
